(U) Comments:

Sent e-mail (attached) to CI [redacted] copied to [redacted] informing him of receipt, assignment, and inventory of evidence and providing contact information. Informed him that the blood specimen from Nezzie was not suitable for testing and that vitreous specimens from Nezzie and Benally, absent request for a specific drug or drugs, would only be tested for alcohols. Also informed him that limited volume of the blood specimen from Tso may limit confirmatory testing and will probably preclude quantitation, other than for alcohols.

evidence submission to FBI Laboratory

[redacted](LD) (FBI) b6 b7C

Wed 9/4/2019 8:46 AM

To: [redacted]

Cc: [redacted]

CI [redacted]:

Your evidence submission in incident 02-19-023167 (deaths of Darryl Nezzie, Shawn Benally, and Chenoa Tso) has been received and inventoried in the FBI Laboratory Chemistry Unit. I am the toxicology examiner assigned to the case and will be issuing the final report of examinations. The assigned FBI Laboratory submission #, which should be referenced in future communications, is 2019-02177. Please let me know if you have any questions, if additional information develops, if deadlines (court date, etc) arise, or if testing is no longer required.

Because of the extremely small volume and poor condition of the blood sample from Darryl Nezzie, I will not be possible to perform any testing on that specimen.

Because only vitreous humour specimens are available for Darryl Nezzie and Shawn Benally, analysis of those samples will be limited to testing for ethanol, methanol, isopropanol, and acetone, unless there is information to suggest significance of some other specific drug(s). If you have a specific drug or drugs for which you would like those specimens tested, please contact me to discuss the issue. Note that some drugs, including THC (marijuana), cannot be tested for in a vitreous humour specimen.

Because of the small volume of the blood specimen from Chemoa Tso, it may be necessary, depending upon findings in initial screening tests, to limit the scope of any confirmatory testing, and it is unlikely that I will be able to perform quantitation of any identified drugs other than alcohols.

Cases received by the FBI Laboratory are prioritized based on trial dates, major crimes, and law enforcement involvement. If the priority or circumstances of your case change prior to issuance of my report, please contact me at the phone number or e-mail below.

Sincerely:

==========

Packaging A1

plastic bag

Within Container A (UN 3373 Pak envelope) was one unsealed and unlabeled zip-top plastic bag. This bag contained one sealed white cardboard box marked, in part, "Log# 2-19-023167 Darryl Nezzie" which contains one sealed plastic blood collection kit tray marked, in part, "Name of Subject: Darryl Nezzie · Date of Incident: 8 3 19 Time: 1535 pm · Date Blood Drawn: 8 5 19 Time: 1535 pm" The tray contains Item 1 and Item 2.

Item 1

Liquid Blood specimen from Darryl Nezzie

Within Packaging A1, one sealed grey-top tube of blood (ca 0.5 ml) marked, in part, "2-19-023167 · Darryl Nezzie" The tube also contains a large clot stuck to the wall.

Item 2

Vitreous Humour Specimen from Darryl Nezzie

Within packaging A1 was one sealed grey-top tube of vitreous humour (ca 1.5 ml) marked, in part, "2-19-023167 Darryl Nezzie"

LABORATORY REPORT

To: [redacted]
The Navajo Nation
Dept. of Law Enforcement
P. O. Box 528
Crownpoint, NM 87313

Date: November 18, 2019

Case ID No.: HQ-A3159619

Lab No.: 2019-02177-4

b6
b7C

Communication(s): August 15, 2019

Agency Reference(s): 02-19-023167

Subject(s):

Victim(s): Darryl Nezzie

Discipline(s): Chemistry - Toxicology

FBI Laboratory Evidence Designator(s):

Item 1 Liquid Blood specimen from Darryl Nezzie

Item 2 Vitreous Humour Specimen from Darryl Nezzie

Item 3 Vitreous Humour Specimen from Shawn Benally

This report contains the results of the toxicology examinations.

Results of Examinations:

No analysis was performed on the Item 1 blood specimen from Darryl Nezzie.

The Item 2 vitreous humour specimen from Darryl Nezzie was tested with the following results:

Analyte	Result	Note(s)
Ethanol and other common volatiles	Not detected.	1

Notes:

1 Analysis was performed by headspace gas chromatography with flame ionization detection and headspace gas chromatography with mass spectrometry.

Results of Examinations:

The Item 3 vitreous humour specimen from Shawn Benally was tested with the following results:

Analyte	Result	Note(s)
Ethanol and other common volatiles	Ethanol was identified at a concentration of 0.245 ± 0.025 gram percent.	1

Notes:

1 Analysis was performed by headspace gas chromatography with flame ionization detection and headspace gas chromatography with mass spectrometry. Gram percent is defined as grams of ethanol per 100 milliliters of specimen. Quantitative values are at a 0.997 confidence level, k = 3.

Limitations:

Analysis of the Item 2 and Item 3 vitreous humour specimens was limited to testing for ethanol and other common volatiles.

Because of the minimal volume and obviously degraded condition of the Item 1 blood specimen, no testing could be performed on that sample.

Remarks:

Testing on the Item 4 blood and Item 5 vitreous humour specimens from Chenoa Tso is ongoing, and results of that analysis will be issued in a separate report.

The FBI Laboratory generally recommends providing a minimum of 10 milliliters of preserved whole blood (one filled blood collection tube) for toxicological analysis in postmortem cases.

For questions about the content of this report, please contact Forensic Examiner [redacted] at [redacted]. b6 b7C b7E

The evidence listed on page 1 will be returned under separate cover.

This report contains the opinions and interpretations of the issuing examiner(s) and is supported by records retained in the FBI Laboratory files. Please allow a minimum of thirty days from the date of a discovery request for the FBI Laboratory to provide the related materials. The FBI cannot ensure timely delivery of discovery requests received in less time.

The work described in this report was conducted at the Quantico Laboratory.

(U) Contact Email: [redacted]
(U) Contact Fax:

(U) Attachments: 1

(U) File Name(s): 2019-02177 acknowledgement e-mail.pdf

(U) Comments:

Sent e-mail (attached) to CI[redacted], copied to [redacted], informing him of receipt, assignment, and inventory of evidence and providing contact information. Informed him that the blood specimen from Nezzie was not suitable for testing and that vitreous specimens from Nezzie and Benally, absent request for a specific drug or drugs, would only be tested for alcohols. Also informed him that limited volume of the blood specimen from Tso may limit confirmatory testing and will probably preclude quantitation, other than for alcohols.

Item 3

Vitreous Humour Specimen from Shawn Benally

Within Packaging B1 was one sealed grey-top tube of vitreous humour (ca 2 ml) marked, in part, "2-19-023167 - Shawn Benally"

Packaging A1

plastic bag

Within Container A (UN 3373 Pak envelope) was one unsealed and unlabeled zip-top plastic bag. This bag contained one sealed white cardboard box marked, in part, "Log# 2-19-023167 Darryl Nezzie" which contains one sealed plastic blood collection kit tray marked, in part, "Name of Subject: Darryl Nezzie · Date of Incident: 8 3 19 Time: 1535 pm · Date Blood Drawn: 8 5 19 Time: 1535 pm" The tray contains Item 1 and Item 2.

Item 1

Liquid Blood specimen from Darryl Nezzie

Within Packaging A1, one sealed grey-top tube of blood (ca 0.5 ml) marked, in part, "2-19-023167 · Darryl Nezzie" The tube also contains a large clot stuck to the wall.

Item 2

Vitreous Humour Specimen from Darryl Nezzie

Within packaging A1 was one sealed grey-top tube of vitreous humour (ca 1.5 ml) marked, in part, "2-19-023167 Darryl Nezzie"

LABORATORY REPORT

To: [redacted]
The Navajo Nation
Dept. of Law Enforcement
P. O. Box 528
Crownpoint, NM 87313

Date: December 13, 2019

Case ID No.: HQ-A3159619

Lab No.: 2019-02177-5

b6
b7C

Communication(s): August 15, 2019

Agency Reference(s): 02-19-023167

Subject(s):

Victim(s): Darryl Nezzie; Chenoa Tso

Discipline(s): Chemistry - Toxicology

FBI Laboratory Evidence Designator(s):

Item 4 Liquid Blood Specimen from Chenoa Tso

Item 5 Vitreous Humour Specimen from Chenoa Tso

This report contains the results of the toxicology examinations.

Results of Examinations:

The Item 4 blood and Item 5 vitreous humour specimens were tested with the following results:

Analyte	Result	Note(s)
Ethanol and other common volatiles	Item 4: Not detected. Item 5: Not detected	1
Cannabinoids (THC and metabolites)	Item 4: Not detected.	2
Antihistamines	Item 4: Diphenhydramine was identified.	3, 6
Benzodiazepines	Item 4: Not detected.	3
Cocaine and metabolites	Item 4: Not detected.	3
Opiates	Item 4: Morphine and codeine were identified.	3, 6
Over-the-counter, prescription, and illicit drugs	Item 4: Cyclobenzaprine and desmethylcyclobenzaprine were identified.	4, 5

Notes:

1 Analysis was performed by headspace gas chromatography with flame ionization detection and headspace gas chromatography with mass spectrometry.
2 Analysis was performed by solid phase extraction (SPE) followed by liquid chromatography with tandem mass spectrometry (LC-MS/MS). THC = Δ^9-tetrahydrocannabinol.
3 Analysis was performed by supported liquid extraction followed by ultra-performance liquid chromatography with high resolution mass spectrometry.
4 Analysis for alkaline drugs was performed by SPE followed by LC-MS/MS. This analysis targeted drugs such as antihistamines, opioid analgesics, antidepressants, antipsychotic medications, and stimulants such as methamphetamine.
5 Analysis for acidic and neutral drugs was performed by liquid-liquid extraction (LLE) followed by gas chromatography with mass spectrometry (GC-MS). This analysis targeted drugs such as barbiturates, seizure medications, and some non-steroidal anti-inflammatory drugs.
6 Confirmation of antihistamines and opiates was performed by SPE followed by LC-MS/MS.

Limitations:

The FBI Laboratory has performed screening in this case for numerous drugs, some of which are only indicated by a general drug class above. Drug dosages, drug metabolism rates, and laboratory detection limits for drugs and metabolites vary. For questions about whether or not a specific drug or drug metabolite would have been detected in this analysis, please contact the examiner issuing this report.

Because of the very small volume of the submitted blood sample, it was necessary to perform some testing on diluted specimen portions. As a result, limits of detection for some drugs and metabolites may have been adversely affected. The submitted specimen volume was insufficient to allow for quantitation of any of the identified drugs and metabolites.

Remarks:

Analysis of the Item 5 vitreous humour specimen was limited to testing for ethanol and other common volatiles.

The FBI Laboratory generally recommends providing a minimum of 10 milliliters of preserved whole blood (one filled blood collection tube) for toxicological analysis in postmortem cases.

Diphenhydramine is a sedative antihistamine available under the brand name Benadryl®, as well as in generic formulations. It is frequently formulated in combination with decongestant medications and/or over-the-counter analgesics. Diphenhydramine is most commonly used to control allergy symptoms, but is also used to prevent motion sickness, as a sleep aid, and in the treatment of tremors associated with Parkinson's disease. The concentration of diphenhydramine in Item 4 was estimated to be below the normal antemortem therapeutic range.

Morphine is an opioid extracted from the sap of the opium poppy, *Papaver somniferum*, which has been used for thousands of years for its analgesic and euphoric effects. It is available by prescription under numerous brand names, as well as in generic formulations. It is used clinically for the treatment of moderate to severe pain and as an auxiliary medication in anesthesia, and can produce sedation and respiratory depression. Morphine is also a metabolite of codeine. Morphine is a Federal Schedule II controlled substance. The concentration of morphine in Item 4 was estimated to be within the normal antemortem therapeutic range.

Codeine is an opioid analgesic extracted from the sap of the opium poppy, *Papaver somniferum*, and available by prescription for the treatment of mild to moderate pain and as a cough suppressant. It is most commonly formulated, under numerous brand names and as generic equivalents, in combination with some mix of acetaminophen, antihistamines, decongestants, and/or expectorants. Codeine by itself is a Federal Schedule II controlled substance, but some mixed formulations are included under lower Schedules. The concentration of codeine in Item 4 was estimated to be below the normal antemortem therapeutic range.

Cyclobenzaprine is a tricyclic-group central nervous system depressant and muscle relaxant available by prescription under brand names including Flexeril®, as well as in generic formulations. It is used for the treatment of pain-related muscle spasms. The concentration of cyclobenzaprine in Item 4 was estimated to be near the bottom end of the normal antemortem therapeutic range. Desmethylcyclobenzaprine is a metabolite of cyclobenzaprine with an unknown degree of physiological activity.

For questions about the content of this report, please contact Forensic Examiner [redacted] at [redacted]. b6 b7C b7E

The evidence will be returned under separate cover.

This report contains the opinions and interpretations of the issuing examiner(s) and is supported by records retained in the FBI Laboratory files. Please allow a minimum of thirty days from the date of a discovery request for the FBI Laboratory to provide the related materials. The FBI cannot ensure timely delivery of discovery requests received in less time.

The work described in this report was conducted at the Quantico Laboratory.
