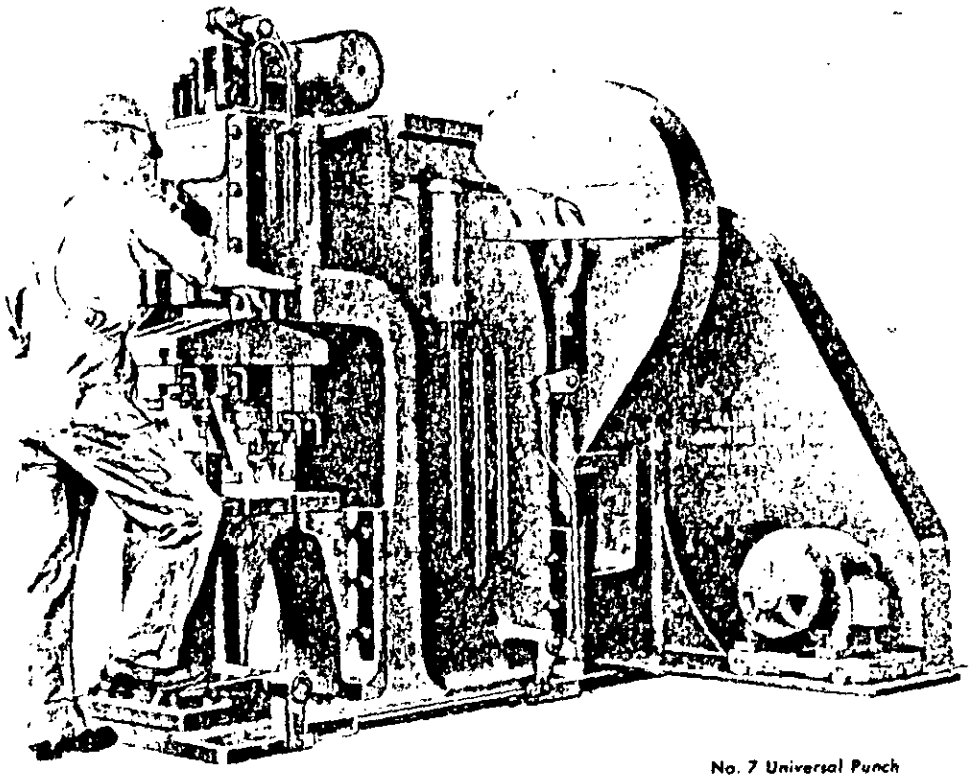
BULLETIN NO. 71



No. 7 Universal Punch

Kling

PUNCHE

KLING UNIVERSAL PUNCHES

FEATURES

Clutches are equipped with adjustable cam. This allows operator to adjust clutch so that punch slide can stop at any predetermined place in its stroke.

Eccentric shafts are one piece steel forgings.

Gears are cast and pinions are of forged steel. All teeth are machine cut. Bearings throughout are bronze bushed with adequate means for proper lubrication. One-shot lubrication systems are optional.

All Kling Punches are especially designed for the proper working heights for the materials that are being handled.

Our machines are warranted for a period of one year against faulty workmanship and material. Warranty does not cover expendable items such as punches, dies, blades, etc.

Built with one piece, cored frames of high grade castings reinforced at all points of stress. Cored frame construction distributes strain equally throughout frame thus minimizing stresses at all critical points.

Designed with large frames to provide proper strength for deep throats. Equipped with semi-floating heads, counterbalanced by springs and weights. Capstans permit quick alignment of the punch and die.

Swing-out strippers permit changing of punches without the necessity of removing the strippers.

Built with replaceable bronze bearings and with adjustable bronze gibs between the slide and frame.

Clutches are of the jaw type assuring positive engagement.

Kling Universal Punches are espec
designed for accurate heavy-
punching. They are rugged mach
built with the rigidity and p
required for extra heavy work
angles and plates. They are
precision machines designed for
and flange punching in channels
beams without constantly chan
set-ups.

Kling SINGLE END CORED FRAME GEARED PUNCHES

Kling Cored Frame Geared Punches are built with a cored frame designed to give the greatest possible strength and rigidity. All of these punches are equipped with cam on clutch for an adjustable stop; eccentric shaft forged in one piece; all shaft bearings are bronze bushed; slide is counterbalanced and fitted with adjustable bronze gibs. Machines can be furnished with cast steel architectural jaw, as shown, or plain flat jaw. Sizes and capacities of machines are listed in following table. Standard equipment includes punching attachment. Shearing attachments and special punching attachments are optional at additional cost.

Punching pressure required for flat punch figuring 60,000 lbs. or 30 tons for shearing one square inch of steel through ⅛ inch.
Multiple punching by staggering punches increases capacity.
Punches in larger sizes made spiral increase capacities 20% to 30%.
Motor drive through V-Belts.
Shearing blades have approximate rake of 1 in 8.
Angle shearing blades are straight avoiding distorting of angle.
All punches available in Double-End type.
*Also available in Quick-Acting Fly Wheel Type.

VERSON ALLSTEEL PRESS

July 8, 1951

Mr. Emmet J. O'Connell
Verson Allsteel Press Co.
1355 East 93rd. St.
Chicago 19, Ill.

Dear Mr. O'Connell:

In reply to your letter of June 26th, we are pleased to present the following information:

Our organization has been in existence since 1941. Devoted entirely to the problems of the metal working industry, we service and sell equipment to a large number of accounts in Maine, Mass., Conn., N.Y. N.J. and Penn.

We furnish engineering, industrial services, and act as distributors for a number of equipment manufacturers. Our organization includes 11 salesmen and is headed by a graduate mechanical engineer who has been active in the tool and equipment engineering field for 17 years.

You may refer for financial reference to the Essex County Branch of the Fidelity Trust Co in East Orange, N.J.

We are interested in having our sales and engineering staff distribute your Sheet Floater as an important addition to our line. Please inform us of our discount schedule, present delivery and what type of sample units you feel are required.

Very truly yours,

Mark Page
